

Supplemental Validity Scales

Name:	Sally A. Miller	Referred By:	Zachary Sample
Gender:	Female	Tested:	January 02, 2018
Age:	40	Processed:	July 23, 2020
Marital Status:	Separated		
Education:	15		

TEST ADMINISTERED: Minnesota Multiphasic Personality Inventory-2 (MMPI-2)

TEST TAKING ATTITUDE Attention and Comprehension: Her score on the Variable Response Inconsistency scale (VRIN) was unelevated; her item responses were self-consistent throughout the inventory. This suggests that she was clearly able to read and comprehend the test items, that she was attentive in considering her responses, and that she consistently matched the item numbers in the booklet to the corresponding numbers on the answer sheet. She does not appear to have had any difficulties in understanding the content or responding to the format of the inventory.

Attitude and Approach: In her approach to the inventory, she was mildly self-favorable and minimizing of psychological problems. The profile appears valid by the usual criteria for scales L, F, and K.

She made almost no atypical and rarely given responses to the items in the second half of the inventory (scale F-back). This was consistent with the relative absence of such rare answers to the earlier MMPI-2 items (scale F). The profile clearly does not appear to be of questionable validity because of atypical responding.

Socio-cultural Influences vs. Conscious Distortion: The supplemental validity scales showed an above average score on the scale (Ss) measuring her level of currently attained, recently experienced, or self-perceived socioeconomic status. She did not show any significant amount of conscious defensiveness, and there were no indications of any intentionally self-favorable slanting of her responses. She appears to be a person of above average socioeconomic status identification whose mild elevation on scale K was probably due to such factors as an emotional reserve or some general sophistication of her self-presentation.
